

Polyurethane trim

Many experts believe that modern materials among one of the most worthy for the production of architectural and interior decoration is polyurethane. It is precisely mimic plaster ornaments, thanks to its solid structure and a special primer coating, in the factory. Unlike cast, however, polyurethane is a lightweight, very durable and does not break, not damaged by moisture, does not change color over time and is economical processing.

Furthermore, the polyurethane elements are much easier to place technology – only finished parts are glued. The devices can be placed in an elastic form, so that significantly simplify the finishing, as they do not require absolute alignment of the wall, as in gypsum. The surface of the polyurethane sets can be laminated or coated. The second option is more expensive but more durable and allows painting with any paint. Because it's hydraulic resistance the polyurethane decorative are washable and can be used In bathrooms and other damp areas in your home.

Impressive range of angular elements, curbs, friezes, cornices and ornamental fragments, which are available for interior and exterior decoration. All they can successfully be applied on both walls and ceilings. There are no problems for decorating doors. For them, can also develop and curb pilasters, which in combination with well-selected and arranged wall and ceiling trim can give a sophisticated and aristocratic appearance of the rooms. Polyurethane does not put barriers to the imagination of the designer. For example, one of the crowning interior design can be the mirror frame, decorated with polyurethane components. Onto the walls can be placed panels that reproduce ancient, mythological or fantastic stories.

When the decorative space is larger, should not ignore the possibility of placing columns. They of course also be made entirely of polyurethane as their capital can recreate the ancient creatures of every architect. If you wish to create an authentic antique look of the rooms can be played and popular of polyurethane statues of antiquity.

As it became clear polyurethane material with unlimited possibilities for use in modern construction, as long as used properly. Is it therefore appropriate to always read the manufacturer's instructions carefully and strictly. Proper use of the product is equally important for the outcome of the work as the quality of the material.
